Why does this matter?

With this upgrade, users may now determine if a vessel has route schedule. These improvements offer two primary advantages to the user:

1. A passenger ship or vessel owner will have a simple way to tell people about their ship and its route.
2. Now, a user or passenger can learn the basic timetable of a passenger ship, which will help them plan their trips to various locations.

Hardware:

What's Changed

- Testing the Wio-E5-LE Mini, a new communication module
